

## CSC 335 : WEB APPLICATIONS II

This course builds on the material in CSC 235 to explore more advanced topics in the development of Web applications. Topics to be covered in this connection include AJAX, JQuery, and Web application frameworks. In addition, there will be substantial coverage of topics from software development practice, as applied to Web programming in a team. The class will implement, as a team, a substantial Web-programming project for a client who is not the professor.
